Supervisory Patent Examiner, Art Unit 1794			

Continuation of 11. does NOT place the application in condition for allowance because: the arguments presented by applicant are not persuasive. Applicant continues to argue that crosslinking the elastin of Buscemi would spoil the drug. While applicant has attempted to provide documentation to support this position, examiner notes that Buscemi discloses that the biodegradable material of the stent is crosslinked and strengthened. (See Col 9, lines 10-18) Buscemi further discloses that the biodegradable material includes collagen or other connective proteins or natural materials. (See Col 6, lines 10-17) Additionally, Buscemi discloses the stent also incorporates bioactive materials such as elastin and collagen. (See Col 12, lines 47-49 and 59-60 and Col 13, lines 10-13) Therefore, examiner notes that it is of no moment that applicant has found a reference to suggest a high possibility of deactivation of an enzyme when crosslinked, when it is clear from Buscemi that the crosslinking step is favorable for production of the stent. Examiner is not persuaded. Finally, applicant argues that in contrast to Buscemi and Sasajima which uses the crosslinked elastin to prevent adhesion of the blood cells, applicant uses the crosslinked elastin to increase tear strength and flexibility. "The fact that appellant has recognized another advantage which would flow naturally from following the suggestion of the prior art cannot be the basis for patentability when the differences would otherwise be obvious." Ex parte Obiaya, 227 USPQ 58, 60 (Bd.Pat. App. & Inter. 1985).
